Script-Controlled ACL – Restrict Record Access Based on Field Value

Phase 6 – Project Testing Phase

Team Leader: K. Amirthalakshmi | Team Members: Aisha Sahana S, Aishwarya S, Abirami S

Purpose

• Verify that the ACL produces the expected result for different field values.

Test Strategy

• Include positive and negative access cases.

• Record actual results only after execution.

Positive Test

• Use a record satisfying the rule.

• Attempt the protected operation.

• Confirm expected access.

Negative Test

• Use a record not satisfying the rule.

• Attempt the protected operation.

• Confirm expected restriction.

Script-Controlled ACL – Restrict Record Access Based on Field Value

Phase 6 – Project Testing Phase – Continued

Additional Testing

• Use different record values.

• Test different users/roles where applicable.

• Repeat tests after corrections.

Defect Handling

• Record mismatch between expected and actual result.

• Check field, ACL, permissions and script.

• Correct and retest.

Evidence

• Use actual screenshots or frames from the screen recording showing the record and result.

Test Summary

• Record total cases, passed cases, failed cases and retested cases using actual values.

Outcome

• Testing establishes whether the implemented ACL meets the defined access rule.
