Script-Controlled ACL – Restrict Record Access Based on Field Value

Phase 7 – Project Documentation Phase

Team Leader: K. Amirthalakshmi | Team Members: Aisha Sahana S, Aishwarya S, Abirami S

Purpose

• Create a complete project record from problem identification through testing.

Report Structure

• Title and team details.

• Problem and objectives.

• Ideation.

• Requirements.

• Design.

• Planning.

• Development.

• Testing.

• Conclusion and references.

Evidence Organization

• Table/field configuration.

• ACL configuration.

• Script/condition.

• Test records.

• Allowed and restricted results.

Results Documentation

• Record actual test results and corrections.

• Do not replace actual results with assumptions.

Script-Controlled ACL – Restrict Record Access Based on Field Value

Phase 7 – Project Documentation Phase – Continued

Conclusion

• Explain what was implemented and how the field value controls access.

• Base the conclusion on the completed project.

Future Enhancements

• Multiple conditions.

• Additional roles/groups.

• Broader testing.

• Additional security rules where required.

Final Review

• Check title and team names.

• Check evidence against actual implementation.

• Check test results against demo.

• Check phase-wise files.

References

• ServiceNow official documentation.

• SmartBridge project material.

• Project-specific ServiceNow configuration.

Outcome

• The documentation becomes the reference for evaluation and demonstration.
